World-Model Design

Prediction Target

Video | Latent | Physical state

Action Query

Passive | Action-conditioned | Joint world-action

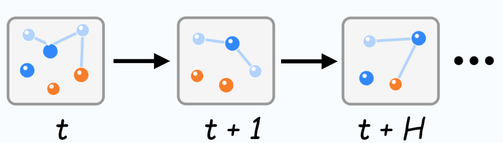

Prediction Consumer

Simulation | Learning | Evaluation | Planning | Correction

Three Evidence Contrasts

1 Prediction vs. Planning

GNS (recursive prediction)

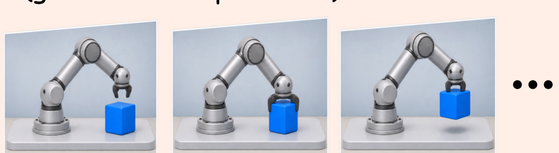

Independent examples

ContactWorld
(prediction + planning)

2 Evaluation vs. Training

DexTouch-WM
(generated experience)

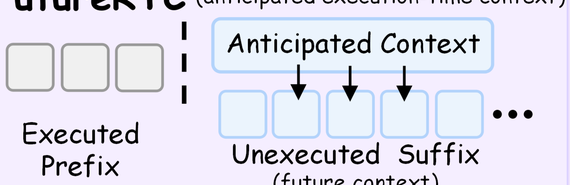

Policy Evaluation

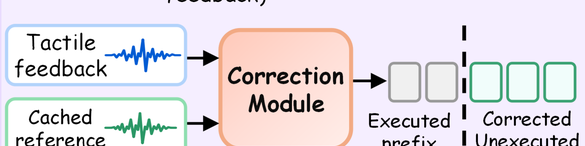

Policy Training

3 Anticipation vs. Feedback Correction

FutureRTC (anticipated execution-time context)

TacPAC (correct unexecuted suffix with tactile feedback)

Claim-Matched Evidence

1. Prediction accuracy ≠ Planning utility
2. Evaluator agreement ≠ Training gain
3. Information access and timing matter
